

Name: Sheila Mhayes S. Mangabat

Project Title: Personal Profile Website

The website is a personal profile page that introduces who I am, my background, interests, and goals. It features an avatar image, an organized layout with educational history, hobbies, and a contact section that includes my email address. The purpose is to create a simple but informative personal webpage that can serve as an introduction or portfolio.

Tools and Platforms Used:

- \* Visual Studio Code (VS Code): For writing and editing HTML and CSS files
- \* GitHub (optional): For version control and potential hosting
- \* Zip utility: To package the website files for sharing and submission

Challenges Faced and How They Were Resolved:

One of the main challenges was organizing the information in a way that is both visually appealing and easy to navigate. Another challenge was incorporating multimedia, such as an avatar image, and ensuring that file paths were correctly linked. These challenges were addressed through structured layout planning and thorough testing of file references and display formatting.
